TEAM SEAT 04 OF 04 · NON-TECHNICAL OPERATIONS & EXECUTIVE GUIDE

GENERAL OPERATIONS & STAKEHOLDER HANDBOOK

Role Mandate: Daily Cockpit Monitoring, Plain-English Controls & Team Coordination System: trading-sandbox v2.4

WELCOME TO THE TEAM — NO CODING OR ADVANCED MATH REQUIRED

As the **Operations & Executive Stakeholder (Seat 04)**, you are the pilot in the cockpit. While the Finance Officer (Seat 01) sets the budget rules, the Quant Researcher (Seat 02) discovers mathematical patterns, and the Software Developer (Seat 03) maintains the cloud servers, **your job is to monitor the live dashboard, run simple one-click checks from your phone or web browser, and keep the whole team coordinated**.

4.1 HOW OUR TRADING MACHINE WORKS (THE SELF-DRIVING CAR ANALOGY)

Most individual traders lose money because they trade on human emotions—fear and greed. To solve this, our team built an automated system that works like a **self-driving car with four automatic safety systems**:

1. The Weather Radar (Market Check) — Built by Seat 02

Before placing any trade, the app checks the "weather" of the stock market. Are prices snapping back like a rubber band (*Mean-Reverting*), moving in a steady highway lane (*Trending*), or flipping like a random coin (*Random Walk*)? If it is a coin flip, the car stays parked safely in cash.

2. The AI Co-Pilot (Confidence Filter) — Built by Seat 02

When a strategy spots a trade, our Machine Learning AI reviews past market history and scores the trade from **0% to 100% confidence**. If the AI thinks the trade is too risky, it automatically steps on the brakes and blocks (vetoes) the order.

3. The Financial Seatbelt (Risk Rules) — Set by Seat 01

Every single order is sized so that if the trade goes wrong, we can **never lose more than 1%** of our account ($4,000 on our $400,000 sandbox). If the account ever drops **3% in a single day**, the master circuit breaker shuts off trading for the rest of the day.

4. The 24/7 Cloud Engine & Remote — Built by Seat 03

The trading program runs 24/7 on a Google Cloud computer so nobody's personal laptop has to stay open. You control and watch everything from your **Discord phone app** and your private **Web Dashboard**.

4.2 HOW OUR 4-PERSON TEAM MOVES TOGETHER TOWARD ONE GOAL

Team Member	What They Do in Plain English	How You (Seat 04) Work With Them Every Week
Seat 01: Finance & Risk Officer	Protects our money, sets the 1% / 3% / 5% safety limits, and audits profit/loss spreadsheets.	Export the weekly `.CSV` Excel trade ledger from Web UI Tab 3 and share it with Seat 01 for review.
Seat 02: Quant / Math Researcher	Tests mathematical formulas and trains the AI brain to spot profitable stock patterns.	Run `!arxiv` in Discord to pull 3-bullet summaries of new research papers and browse new ideas in Web UI Tab 2.
Seat 03: Software Developer	Keeps the Google Cloud server, Discord bot, and Website running smoothly without bugs.	If you notice a red error message in Discord `#bot-errors` or the Website feels disconnected, tag Seat 03 in `#bugs`.
Seat 04: General Operations (You)	Monitors daily signals, checks AI trade probabilities on Discord, and holds the emergency stop button.	Perform the 5-minute morning, midday, and closing checks listed on Page 2 of this handbook.

4.3 STEP-BY-STEP CHEAT SHEET: USING DISCORD & THE WEB DASHBOARD

Tool & Location	What to Click or Type	What It Shows You in Plain English
Web Dashboard Tab 1: Live Graph & Log	Open `index.html` → Click **AAPL**, **SPY**, or **GLD/GDX**	Shows a live stock price chart with upper and lower trading bands on the left, and a live scrolling feed of what the robot is doing on the right.
Web Dashboard Tab 2: Strategy Hub	Click **2 · Ernest Chan Strategy Hub**	A library of proven trading strategies and live research notifications where our team can view blueprints and deploy them with one click.
Web Dashboard Tab 3: Excel Ledger	Click **3 · Execution Spreadsheet** → Click **⬇ Export .CSV**	An Excel-style spreadsheet showing every past trade, win rate, and net profit. You can type notes directly into the last column and download it for Excel.
Discord App `#risk` channel	Type: `/position_size entry:150 stop:145`	Replies with a clean blue summary card showing the exact number of shares we are allowed to buy safely under our 1% risk rule.
Discord App `#quant-agent` channel	Type: `/ai_veto symbol:SPY`	Asks our AI brain to scan the market right now and reply with ✅ `APPROVED` or 🛑 `VETOED` plus its exact percentage confidence score.
Discord App `#research-agent` channel	Type: `!arxiv`	Fetches the newest quantitative finance research paper in the world and summarizes it into 3 simple bullet points.

4.4 YOUR 5-MINUTE DAILY ROUTINE (MORNING, MIDDAY & MARKET CLOSE)

Follow this simple checklist on market days (Monday through Friday) to keep the team running smoothly:

- **Morning Check (Before 9:30 AM EST):** Open the Web Dashboard (`index.html`) and verify the top bar reads **Account Status: ACTIVE**, **Buying Power: ~$400,000**, and **Cloud Node: Online**. Check Discord `#system-status` to confirm no overnight server errors occurred.
- **Midday Check:** Look at Web UI Tab 1 or Discord. If the bot says ⚪ `NO SIGNAL: Holding current state` (for example, when AAPL Z-Score is 2.03), **do nothing**—that means the bot is patiently waiting for a safe, high-probability setup.
- **End-of-Day Check (After 4:00 PM EST):** Open Web UI Tab 3 (*Execution Spreadsheet*) to review any completed trades and add a quick note in Column O if needed.

4.5 THE THREE GOLDEN SAFETY RULES & EMERGENCY BRAKE

> **GOLDEN RULES FOR EVERY TEAM MEMBER**
>
> **Rule 1 — Never Mix Personal Savings with Trading Capital:** Long-term retirement and personal savings accounts are 100% separate from this trading system.
> **Rule 2 — Never Force a Trade When the System Says Wait:** Emotional boredom destroys trading accounts. Trust the team's math and let the robot sit in cash when markets are noisy.
> **Rule 3 — How to Pull the Emergency Brake:** If Seat 01 (Finance) or Seat 03 (Software) ever asks for an immediate trading halt, open Discord `#admin` and type `!cancelall`, or click the red **Emergency Position Liquidation (!cancelall)** button on the Web Dashboard.
